# MASTER'S DEGREE PROGRAMME IN ENERGY ENGINEERING

Are you interested in future technologies of alternative energy sources? What about lean and agile product manufacturing? If yes, apply and get a degree that has real value in labour market! The focus of the Master Degree Programme in Energy Engineering is to educate professionals in engineering and business management in the field of international energy engineering projects. Studies can be done alongside work and with online learning methods.

The aim of studies is to create highly skilled specialists for the following fields of expertise:

- **managing international energy technology projects and supply chains**
- **developing advanced energy production systems**
- **intercultural communication and language skills**

The studies contain 60 ECTS and they can be completed in 1,5 - 2 years. After completing the studies you will be able to work in expert and managerial positions in the large international companies with their subcontracting companies in multiprofessional workplaces.

**For EU/EEA area and Swiss citizens there is no tuition fee.** There will be a tuition fee applicable to students who are not citizens of countries of the European Union (EU), European Economic Area (EEA) or Switzerland. The tuition fee for Master level studies is 6000 euros / academic year in Savonia UAS. In the first academic year all students who are obligated to pay the tuition fee will automatically get the scholarship, which covers 70% of the tuition fee.

**Applying requirements:** BSc degree and two years of professional work experience.

**Apply and start your studies in January 2021!**

**Apply between  
2nd – 16th of September in  
[www.studyinfo.fi](http://www.studyinfo.fi)**
